

Install the source project

Use the included Unity project as authored. The first import can take several minutes.

UNITY EDITOR

2022.3.62f1

PROJECT FOLDER

adam-unity-character-controller

SCENE

Unity_Adam_Studio.unity

1 Extract and select the project root

Extract the complete Cubebrush download. In Unity Hub, choose Add project from disk and select adam-unity-character-controller. Select the folder that contains the project folders - not the Assets folder itself.

EXPECTED ROOT CONTENTS**Assets/****Builds/****Packages/****ProjectSettings/**

2 Let Unity restore the required packages

Open the project with Unity 2022.3.62f1 and allow the initial import and compilation to finish. Keep Packages/manifest.json and Packages/packages-lock.json intact so Unity Package Manager restores the declared dependencies.

CONFIRM THESE PROJECT-CRITICAL PACKAGES**Animation Rigging**

com.unity.animation.rigging 1.2.1

Universal Render Pipeline

com.unity.render-pipelines.universal 14.0.12

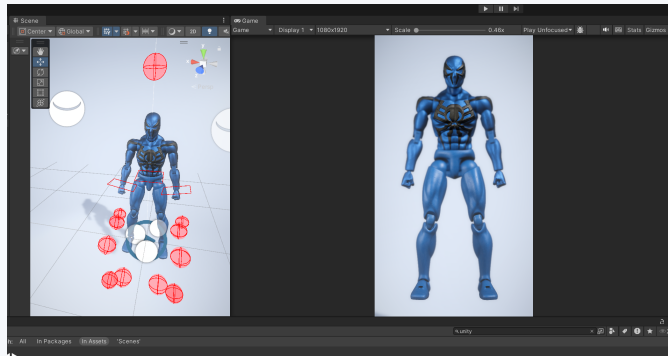

Optional: add WebGL Build Support only if you plan to create a browser build.

Open the scene and run

3 Open the correct scene

In the Project window, open Assets > Scenes, then double-click Unity_Adam_Studio. Confirm the Hierarchy header shows Unity_Adam_Studio before continuing.

4 Run in the Unity Editor

Wait until package import and script compilation are complete, then click the Play button at the top of the Editor. Click Play again to stop.

5 Launch the included Windows build

Download the Windows build ZIP from the Download Builds link. Extract the entire ZIP before opening the application. Keep Final_Toy.exe, the Final_Toy_Data folder, UnityPlayer.dll, and all other generated build files together. In the extracted build folder, double-click the actual Final_Toy.exe application, not a shortcut.

TROUBLESHOOTING

Missing packages: reopen with Unity 2022.3.62f1, wait for Package Manager to finish, and confirm Animation Rigging 1.2.1 and URP 14.0.12.
Wrong or empty scene: reopen Assets/Scenes/Unity_Adam_Studio.unity. Build will not start: extract the entire ZIP first.
